

WP PLUGINS KC-DEV

Introducing WP Mobile Notifier

BY — 24 JUL, 2026

WP Mobile Notifier makes sure no new post goes unnoticed.

FEATURES

- Sends a JSON notification (post title + permalink) to any messaging API endpoint when a post is published.
 - API endpoint, API key, and recipient number are configured in the KC-Dev settings panel; the key travels as an `x-api-key` header.
 - Master switch to pause notifications without losing the configuration.
 - No mobile notification sent yet.
- shortcode shows when the last notification went out and for which post.

Status:

No mobile notification sent yet.
