

WP PLUGINS KC-DEV

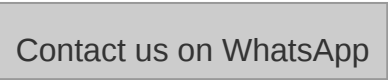

Introducing WhatsApp Messaging

BY — 24 JUL, 2026

WhatsApp Messaging connects the site to an external WhatsApp messaging API and turns it into a spam-proof contact channel.

FEATURES

- Form builder in the KC-Dev panel: custom fields (text, email, phone, number, textarea), each optional or required.
- OTP verification: visitors receive a one-time code on WhatsApp and must confirm it before the submission is delivered — no fake numbers, no bot spam.
- Message templates with {Field Label} placeholders and WhatsApp styling (**bold**, *_italic_*).
- Automatic number normalization with a configurable default country prefix.
- Message logs with status and API response, exportable as CSV.
- Settings panel with usage guide under the KC-Dev admin menu.
- 

`shortcode; mode="inline"` renders a text link instead of a button.
