

WP PLUGINS KC-DEV

Introducing WP GDrive Backup

BY — 24 JUL, 2026

WP GDrive Backup covers the site's disaster-recovery story end to end.

FEATURES

- Scheduled (daily/weekly) or manual backups: files cloned via rsync, database dumped via PHP, packaged into a single tarball.
- Uploads to Google Drive (OAuth2, resumable chunked upload) and/or any S3-compatible storage (AWS SigV4 signing, no SDK needed), with configurable retention.
- One-click restore from either destination, including automatic domain/URL search-and-replace after restoring onto a different host.
- Media offloader: new uploads go straight to a dedicated Google Drive folder and the local copy is deleted; images are served straight from Drive. Bulk migration, reverse migration, and a link-repair tool are included, plus a Drive media browser right in the post editor.
- Integrates with Core Integrity Checker to flag a compromised site before you back it up.
- Settings panel with usage guide under the KC-Dev admin menu.
- shortcode: last backup status and offload count, admins only.
