

WP PLUGINS KC-DEV

Introducing KC Developer Manager

BY — 24 JUL, 2026

KC Developer Manager is the packaging and licensing backend for everything built in this workshop.

FEATURES

- **Package & Publish:** zips any plugin authored “KC-Dev” and writes a ZIP + JSON update manifest into a configurable updates folder — the same shape WordPress core’s update checker expects.
- **Optional subscription licensing:** mark a plugin “Subscription Required” and a license-check stub is auto-injected into its ZIP on the next publish.
- **License management:** generate, revoke, and track per-client license keys (1-year expiry, domain-locked), validated over a REST route (`kc - licenses/v1/validate`).
- Settings panel with usage guide under the KC-Dev admin menu.
- `[kcd_kc_developer_manager]` shortcode: published-plugin and active-license counts, admins only.
- **Public downloads list:** `[kcd_kc_developer_manager_downloads]` shows every published plugin with its version, description, a “License required” badge where applicable, and a download link — drop it on any page.
