

WP PLUGINS KC-DEV

Introducing KC Festive Effects

BY KC-DEV — 07 AUG, 2026

KC Festive Effects is a WordPress plugin that adds decorative visual effects to a site without modifying the active theme. It offers five themes — snow, confetti, Christmas, Diwali, and Holi — each with falling particles, scattered stickers, and click-triggered bursts at the cursor position.

The plugin includes adjustable particle density, a choice between front-page or site-wide display, and a shortcode for placing effects on specific pages. Visitors with reduced-motion preferences enabled will see only static stickers, with all animations disabled automatically.

KC Festive Effects overlays the active theme with lightweight, purely decorative frontend effects — no theme edits required.

FEATURES

- **Five themes:** falling snow, confetti, a dedicated **Christmas** theme (snow + stickers), **Diwali** (auto-launching fireworks + twinkling string-light stickers), and **Holi** (falling paint colors + splash stickers).
- **Click tracker:** clicking anywhere on the page fires a themed burst right at the pointer — a firework that rises from the bottom of the screen and explodes where you clicked (Diwali), a paint splash with flying droplets (Holi), or a twinkling glitter sparkle (Christmas, Snow, Confetti). It reads the click from the page underneath a `pointer-events: none` canvas, so it never blocks an actual link or button.
- **Decorative stickers scattered across the whole page** (not just one corner) — Christmas, Snow, Confetti, Diwali, Holi — each gently swaying, or twinkling like fairy lights for Diwali.

- **Adjustable particle density and sticker count** so every effect can be as subtle or as busy as you want.
- **Display scope:** front page only (the default) or the entire site.
- **Shortcode override:** `[kcd_kc_festive_effects]` forces the configured effect onto whatever page it's placed on, regardless of the scope setting.
- **Accessible by default:** visitors with “reduce motion” enabled in their OS/browser see only the static stickers — all animation, including fireworks and click effects, is skipped entirely.
- Settings panel with usage guide under the KC-Dev admin menu.

This post has the shortcode on it, so the configured theme is active here right now — try clicking anywhere on the page:
